                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Perfect score:
      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell cumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to continibit the expression and activity of BLyS. The antibodies bind to BLyS in the solution of BLyS in this way to diagnose disease associated with aberrant expression of BLyS. They may also be associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and conditioney (e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (eyc.) and activity such as cancer, immune, and autoimmune disorders and conditioney (e.g. common variable immunodeficiency (CVID) and conditioned immunodeficiency (eyc.) and activity such as cancer, immune (AIDS)). ABP43990-ABP47228 represent confirming and invancional fragments of the antibodies described in the method confirming the invancional fragments of the antibodies described in the method confirming the invancional fragments of the antibodies described in the method confirming the invancional fragments of the antibodies described in the method confirming the invancional fragments of the antibodies described in the method confirming the invancional fragments of the antibodies described in the method confirming the invancional fragments of the antibodies described in the method confirming the invancional fragments of the antibodies described in the method confirming the firming t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                The present sequence is that of the heavy chain variable region (VH) of the anti-decay accelerating factor (DAF) human antibody (VH) of the anti-decay accelerating factor (DAF) human antibody LU20. The VL region is given in AAY06052. LU20 was produced using a coven method for making antibodies which can be used for cancer diagnosis or therapy. The method comprises: (a) binding an antibody phage firm a naive antibody phage intrary to a live cancer cell; (b) selecting an antibody phage or antibody which binds selectively to the live cancer cell; and (c) identifying an antigen to which the antibody phage or antibody binds. To obtain LU20, a human scFv library was used to search for tumour-associated antigens by panning the lung adenocarcinoma cell line 1264, and counter-selecting with a non-tumour bronchial epithelial cell line, BEAS-2B. The invention also describes a method for identifying an antigen which is differentially expressed on the surface of 2 or more distinct cell populations. The anti-DAF human antibody, or a composition comprising the antibody, is useful for in vivo cancer diagnosis or therapy. In particular, the antibody is useful for diagnosis or treating lung cancer, e.g. small-cell lung cancer, non-small cell lung cancer, large cell lung carcinoma (all claimed).
                                                                                                                                                                                                                             Query Match

The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus crythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; 5' EST; expressed sequence tag; secreted protein; diagnosis; gene therapy; chromosome mapping; upstream regulatory sequence; forensic; location; development; protein synthesis; stability;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc products. They can be used to identify and isolate 5' untranslated cc regions (UTRs) and upstream regulatory regions which control the clocation, development stage, rate, and quantity of protein synthesis, as cc well as stability of mRNA. The ESTs are also useful as probes for cc chromosome mapping, and to obtain full length cDNA clones. The ESTs can also be used in forensic procedures to identify individuals, or in cdiagnostic procedures to identify individuals having genetic diseases cc resulting from abnormal gene expression. The products may also be used in cc used for directing extracellular secretion of a polypeptide can be compared to the proteins encoded by the ESTs can be compared to the proteins encoded by the ESTs can be contained a variety of human conditions. Secreted proteins have cc raluable. AAZ42249 to AAZ4264 and AAX64644 to AAX64650 represent cx sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              문
The present sequence is an agonist antibody clone to the human WSX receptor, which can be used to identify and purify ligands and cativators. An anti-WSX receptor antibody can be used as an agonist to activate the WSX receptor, leading to enhanced proliferation or differentiation of a cell expressing the WSX receptor. It can also be used to decrease body weight and/or fat-depot weight and/or food intake in an obese mammal. WSX receptor ligands can be used to contake in an obese mammal. WSX receptor ligands can be used to reputation or differentiation of lymphoid, myeloid or crythroid blood cell lineages. This is useful when a mammal, is suffering from decreased blood cell levels, i.e. anaemia, caused by chemotherapy, radiation therapy or bone marrow transplantation therapy. It can also be used to repopulate blood cells in a mammal. The products can also be used to treat, e.g. neoplastic disorders, arteriosclerosis, Type II diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have

G

antirheumatic

immunosuppressive, immunost: lc and antiAIDS activity and

can be used in vaccines

The method comprises constructing a scrv antibody library composed of phage clones expressing scrv antibody on their surface, screening this library with an antigen, extracting the gene for scrv antibody from the selected phage clones and inserting it into an expression vector that expresses the gene fused to a fluorescent protein. Also described are: (1) a fusion protein comprising the scrv antibody fused to a fluorescent protein; (2) immunological assays using the fusion protein of (1); (3) an expression vector encoding the fusion protein of (1), and (4) a kit for producing the fusion protein of (1). The fusion protein can be used in immunoassays and immunostaining.

Immunological assays using the fusion protein do not require a secondary or tertiary antibody. Direct intracellular and even in vivo assays are possible. ABL49521 to ABL49591 and ABB06276 to ABB06276 represent
                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Producing scFv antibody fused to a fluorescent protein, useful for immunoassay and immunostaining, comprises expressing a scFV gene (extracted from selected clones) fused to a fluorescent protein gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2002-098058/13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Morino

CC The patent discloses a numanistic anticopy of the patent discloses a numanistic anticopy of the control of the patent discloses a numanistic anticopy for CC-chemokine receptor 2 CC (CCR2), comprising an antigen binding region of non-human origin. The cand at least a portion of an immunoglobulin of human origin. The comprising are useful for inhibiting the interaction of CC humanised antibodies are useful for inhibiting the interaction of CC acell expressing CCR2. They are useful for inhibiting or treating CCR leukocyte trafficking, for treating CCR2-mediated disorders such as reumatoid CC arthritis and multiple sclerosis, atherogenesis and atherosclerosis, CC and for inhibiting restenosis. They are useful in therapy or disgnosis, CC and for inhibiting restenosis. They are useful in therapy or disgnosis, CC and for the manufacture of a medicament for treating CCR-2 mediated CC disease. They are also useful for treating allergy, anaphylaxis, CC mediated allergic reaction, shock, stenosis, allograft rejection, CC disease, asthma, inflammatory glomerulopathies, acquired cintervention, including angioplasty and/or stent placement in a mammal. CC Humanised antibodies are also useful for inhibiting narrowing of the CC used and antibodies are also useful for inhibiting narrowing of the CC a vessel in a mammal, preferably associated with vascular intervention. The present sequence is human heavy chain variable (VH) region, UBI-24.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          multiple scierosis; atherogenesis; atherosclerosis; restenosis; asthma; anaphylaxis; malignancy; inflammation; stenosis; allograft rejection; fibrotic disease; angioplasty; acquired immune deficiency syndrome; AIDS; inflammatory glomerulopathy; vascular intervention; 1D9 antibody; neointimal hyperplasia; VH; heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Humanized immunoglobulin for treating a CC-chemokine receptor 2-mediated disorder in a patient, comprises a binding specificity for CCR2, and a non-human antigen binding region and human immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; humanised antibody; CC-chemokine receptor 2; CCR2; nephrotropic; neuroprotective; immunosuppressive; human immunodeficiency virus; HIV infection; cytostatic; vasotropic; leukocyte trafficking; allergy; inflammatory disorder; autoimmune disorder; rheumatoid arthritis; shock;

                                                                                                                                                                                                                                               This sequence represents a VH domain complementarity determining region (CDR) from an antibody specific for estradiol. The invention relates to specific binding members (sbp) comprising a polypeptide that comprises an antibody antigen binding domain (AABD) which has a dissociation constant of less than 1.0x10^-8M for estradiol, and a dissociation constant of at least 500-fold higher for the steroid hormones selected from estriol, testosterone, dihydrorestosterone, progesterone, estriol-3-sulphate and estriol 3-beta-di-glucuronide, where the polypeptide comprises an antibody VH domain. The sbps can be used in an immunoassay for determining the presence or absence of estradiol in a sample. They can be used for monitoring estradiol levels, e.g. during the menstrual cycle, in hormone replacement therapy and for disgnosing ostrogen secreting them of the sbps can provide for disgnosing ostrogen secreting of the standard process.
